2<sup>nd</sup> CORRECTED INFORMATION DISCLOSURE STATEMENT

Dear Sirs,

Please replace the Corrected Information Disclosure Statement filed on January 7, 2003 with the herewith presented 2<sup>nd</sup> Corrected Information Disclosure Statement. This 2<sup>nd</sup> Corrected Information Disclosure Statement contains a more accurate listing of the references than the Corrected Information Disclosure Statement filed on January 7, 2003, which it replaces.

In response to the defects in the original Information Disclosure Statement of June 22, 2001, as outlined in the Office Action of December 17, 2002, Applicant herewith submits a 2<sup>nd</sup>

corrected PTO-1449 Form. As copies of the cited references have been submitted on June 22, 2001, Applicant is not enclosing duplicate copies of the references. Should duplicate copies of the references be desired, Applicant will provide them upon request. Applicant requests that the Examiner consider the references cited in the specification and presented in this Corrected Information Disclosure Statement as follows:

**“Identification of Phosgene (Chloropropenyl) Hydrazones as the Causative Chemicals of Contact Dermatitis from Yellow Cotton Sweaters”** is an article discussing a case of a chlorinated phosgene compound produced from a reaction of sodium hypochlorite and yellow dye in a DC brand sweater. No translation of this article is available to Applicant at this time however, an English abstract is provided. The reference is discussed at page 1 of the specification.

The article **“Chemical Approach to Contact Dermatitis Caused by Household Products. V. Pigmented Contact Dermatitis from Naphthol AS in Cotton Flannel Nightdresses”** discusses a case of ground naphthol AS remaining on cloth in cotton flannel night clothes. No full translation of the reference is provided however an English abstract is attached. This reference is discussed at page 2 of the specification.

The article **“Two Cases of Pigmented Contact Dermatitis”** provides a discussion of two cases of pigmented contact dermatitis. This reference is discussed at page 2 of the specification.

The publication **“Multiple azo Disperse Dye Sensitization Mainly Due to Group Sensitizations to azo Dyes”** provides a discussion including a case of disperse red 153, disperse

blue 106 and disperse blue 124 in one-piece dress. This reference is discussed at page 2 of the specification.

The article **“A Case of Dermatitis Due to Glasses”** provides a discussion of a case of azo disperse dyes disperse yellow 3, disperse orange 3 and disperse red 17 formulated as coloring agents in plastic eyeglass frames. The English abstract is attached. This reference is discussed at page 2 of the specification.

An article **“An Important Role of Dyes as Causes of Allergic Contact Dermatitis from Plastic Parts of Eyeglasses”** is presented in the journal *Environmental Dermatology* 1998; 5 (Supple. 1):92. The English abstract is attached. This reference is discussed at page 2 of the specification.

The publication **“OECD Guidelines for Testing of Chemicals”** presents guidelines in which priority is given to the Beuhler test method and the maximization test of Magnusson and Kligman using guinea pigs (maximization test method). This reference is discussed at page 2 of the specification. No full translation of this reference is available to Applicant at this time.

The publication **“Skin Sensitization, Section B6”** includes a section providing information as to the tests noted above.

Consideration of the reference is requested.

Respectfully submitted  
for Applicant,

By:

  
John James McGlew
